

## The Santa Barbara County Fish and Wildlife Commission: Comments on Proposed MPA Petitions

The Santa Barbara Fish and Wildlife Commission is a county commission consisting of nine members appointed by the Santa Barbara County Board of Supervisors. The commission, among other things, aids the county board on active fish and wildlife related matters with our combined hundreds of years of local fish and wildlife experience between our fellow commissioners.

This comment letter serves to provide our input regarding the current MPA petitions requesting changes be made to the MPA network specifically around the Santa Barbara Channel and Channel Islands. We feel our county fish and wildlife commission's input on the MPA petition process may prove especially valuable due to our local experiences and local understanding of the ecosystem, as well as our variety of backgrounds, consisting of non-consumptive users, fishermen, and biological scientists. This letter serves as a culmination of many public meetings learning about the MPA petitions that have been proposed as well as fellow commissioners observations being involved in local discussions about the petitions outside of official meetings to gauge public input and sentiment. This county commission appreciates the opportunity to provide the following feedback on these local MPA petitions.

### **Petition2023-14MPA**

Petition2023-14MPA requests changes to several State Marine Conservation Areas (SMCAs), one of which, the Naples SMCA, is within the County. Generally, SMCAs already allow for some form of limited take, this petition requests adding commercial take of sea urchins to the allowable methods list inside of the SMCAs in the petition.

Sea urchins are primarily taken commercially and are a core part of the County's commercial fishing sector. Urchins, and their tendency to graze on the root systems of local kelp forests, have recently posed problems with kelp rebuilding efforts after El Ninos in the 2010's reduced kelp forest size noticeably. Local fishermen cite urchin barrens inside of MPAs that cannot be touched and continue to spread to the surrounding area with no possible measures existing to remove the main mass from the MPA.

Recommendation: While cases may vary across different MPAs and counties, for the above reasons, this commission finds it reasonable to allow the proposed change and supports the petition for allowed sea urchin take at the Naples SMCA to help facilitate kelp forest regrowth. We kindly recommend this change be allowed at Naples.

## **Petition2023-15MPA-AM**

Petition2023-15MPA requests changes to three joint State and Federal Marine Reserves (SMRs/FMRs), all of which, the Footprint SMR/FMR, Gull Island SMR/FMR, and Santa Barbara Island SMR/FMR, border the county. These MPAs, and others around the Channel Islands, are unique to the State network in that they were established through a joint process between State and Federal agencies before the coastal MLPA under the CINMS. The resulting network was a series of state and federal MPAs at the Channel Islands that covers federal water up to 6 nautical miles from the islands. All SMRs and FMRs the petition addresses are currently no-take areas.

The petition requests changing these areas to joint State and Federal Marine Conservation Areas, SMCAs and FMCAs, and proposes several options that allow for various forms of the limited take of pelagic finfish or highly migratory species recreationally and commercially. In addition, the petition provides possible sub-divisions of the Gull Island and Santa Barbara Island State MPAs into nearshore and offshore areas, similar to other State MPAs elsewhere. The primary arguments of the petition are the minimal impact pelagic fishing effort has on the local MPA ecosystem and goals, and the support of pelagic areas in the State's MPA Master Plans and other documents seen in the broader coastal network but apparent lack thereof in the pre-Master Plan Channel Islands network.

Several members of this commission were part of the original process at the Channel Islands over 20 years ago and the southern MLPA in 2012. We all understand that the primary factor for the MPA implementation at these island sites offshore was to originally protect species like groundfish and structure groundfish live on to rebuild overfished populations at the time. While MPA goals have changed since the 2000s, this fact is still key to understanding why these areas are the way they are today.

Pelagic fish, and the methods used to target them, are predominantly fished near the surface of the water column, offshore, and off the bottom. This type of effort avoids the nearshore or offshore rocky-bottom ecosystems local nearshore species or groundfish are predominantly found in. In addition, the pelagic species that would be taken in these areas are significantly less affected by these MPAs and the broader network due to them being very mobile, their relative abundance is not concentrated in an MPA compared to out of one. The MPA Master Plans from 2008 and 2016 discuss this, citing the lower effects that MPAs have on pelagic species and the need to have areas that allow for some form of limited pelagic take, aligning the petitioner's arguments with the Master Plans. In addition, the petition does point out an imbalance in pelagic allowed areas between the MLPA's coastal implementation phases that came after the first MPA

Master Plan in 2008 and the Channel Islands Network implementation that came well before the first MPA Master Plan in the early 2000's.

Outside the Channel Islands, in the coastal network that came afterwards, most MPAs that overlap deeper waters pelagic species pass through allow for some form of take of pelagic finfish. Observing the Channel Islands, we can see a significantly higher overlap with offshore waters, namely due to the federal sections of these MPAs. However, even with this significantly larger offshore encroachment, almost no pelagic allowed areas exist. Whether this difference was due to the Channel Islands process pre-dating the coastal process and the 2008 MPA Master Plan's outlook on pelagic species is up to debate, but the fact of the matter is the difference is noticeably present, and for no abundantly clear reason.

Recommendation: The subject of island MPAs allowing pelagic take, specifically these three, has been raised by the public several times prior at our meetings, and local MPA collaboratives our commissioners have attended. For these reasons, and those above, this commission supports this petition, and believes it should be accepted by the State Commission through one of the proposed "options" the petition lists that best fits the existing network.

### **Petition2023-18MPA**

Petition2023-18MPA requests multiple changes to a variety of coastal and island MPAs within the county. Some of the changes are listed as "non-regulatory requests" by the Department while others make modifications to, or remove existing MPAs. All but one of the MPAs in the petition are within the County, they are the: Vandenberg SMR, Point Conception SMR, Kashtayit SMCA, Campus Point SMCA, and San Miguel Island Special Closure.

Of the changes, the proposal at Vandenberg SMR and San Miguel Island Special Closure are the two MPAs that would have the largest regulatory changes. At Vandenberg the petition requests a coastal SMCA be made that allows for only shore-based fishing by hook-and-line, citing an equity and enforcement concern between military base personnel and members of the public. Because military personnel are allowed to fish the shore of the SMR while members of the public outside the base cannot due to the SMR, both the equity and enforcement concerns are certainly present and should be addressed. The proposed solution of a shore based SMCA does seem to be a reasonable way to correct this problem.

At San Miguel and Anacapa (outside of the county) the petition requests the Special Closure(s) be removed in its entirety citing its original goal being to reduce disturbance

to pinniped rookeries and seabird populations has been far exceeded and better methods have been developed on-site.

The remaining MPA requests are non-regulatory and include supported use for M2 radar monitoring at Point Conception SMR for better enforcement, a refined regulatory language for allowances at the Kashtayit SMCA, and using the color red instead of purple for distinguishing the Campus Point No-Take SMCA.

Recommendation: This commission finds all of the above modifications and requests more than reasonable, gives its support for them all. We recommend the FGC accept the petition in full.

#### **Petition2023-28MPA-AM**

Petition2023-28MPA requests to create a new MPA around Point Sal, designating it the Point Sal SMCA or a Tribally named SMCA, and listing it as a limited-take area with only an exception of a shore based finfish take allowance and tribal take allowance. The petitions driving reasons for the new MPA are that the area is ecologically significant in terms of local upwelling and relative to the landings that occur there the area is a small fraction of the State's commercial output, under 1%. The petition also cites tribal inclusivity and significance in the area as justification for its closure.

While the petition is accurate in the broader economic analysis, locally Point Sal is a very important area for both recreational and commercial operations out of Port San Luis (Avila), the local port to Point Sal. Point Sal, and its surrounding waters, are essential for year-round and seasonal fisheries such as salmon, dungeness crab, groundfish, and halibut. This new MPA in addition to the existing network will significantly affect the local port's economic health due to Point Sal's being a significant fishing area for local commercial and recreational anglers. Namely, crab and groundfish boats out of Avila would be significantly affected by this change as per their testimony, over half their time is spent in the proposed area.

Recommendation: While the shore-based allowance is a welcome allowance, we believe this is still too costly on the local economy of Avila and its recreational and commercial fisheries to warrant its allowance. For this reason this commission has decided to be against this petition, and recommends the FGC deny it.

#### **Petition2023-29MPA-AM**

Petition2023-29MPA requests to create a new MPA around Carpinteria, designating it the Mishopshno SMCA. The petition asks to make take regulations for the area the same as the Point Sal petition, with an allowance of shore fishing of finfish and a tribal

exception for those in the federally recognized Santa Ynez Band of Chumash Indians which would be able to still use tribal take methods inside of the SMCA. The proposed area's size was reduced when the petition was amended to include the shore allowance.

The petition's primary reasons for this MPA include this tribal allowance and co-management model along with the added reasons of MPA connectivity, spacing, and protecting juvenile great white shark nursery grounds. While this commission does agree that Tribal inclusion is a warranted piece of MPA and coastal management, we do not believe that a new MPA altogether is needed to accomplish this. MPAs across the coast can be modified themselves to allow for such co-management but the existing area offshore Carpinteria is currently open to the entire public, Tribes included.

Carpinteria's coast has been the subject of several MPA proposals over the years. During the MLPA the same area was looked into but was ultimately not selected, trading off two other SMCAs instead of establishing one at Carpinteria in a separate MLPA planning alternative. In 2020 this commission also followed a similar MPA petition in a smaller area to the current proposal that similarly advocated to protect juvenile great white sharks. That petition was ultimately rejected by CDFW due to the larger footprint white sharks, a pelagic species, covered relative to the coast of Carpinteria/California in general, and we believe the same reasons from 2020 are still relevant in 2024 against the petitioner's arguments.

Additionally, it should be said that Carpinteria Reef, the reef that would be almost entirely inside the MPA, is one of the last open reef areas to the fishing community. Removing this reef will see the end of local fishing access to coastal reefs, forcing anglers to travel further, coastally or to the islands, and burning more fuel to have similar opportunities. Commercial members of this commission are concerned for the areas of the proposed MPA that overlap the state halibut trawl grounds. These grounds are minimal already and have been reduced continuously over the years. This proposed MPA would cut a significant portion of the current open trawl area harming this unique fishery that the commission has repeatedly stated is well managed. Lastly, there is an overwhelming amount of public outcry on this petition specifically citing lost access to one of the last open reefs on the coast by boat and especially kayak.

Recommendation: For all of these reasons this commission has decided to be against this petition, and requests the FGC deny it.

### **Petition2023-33MPA-AM**

Petition2023-33MPA requests for multiple MPA expansions and one MPA creation throughout the California coast, of which, three MPA expansions are within Santa Barbara at the Point Conception SMR, the Gull Island SMR, and the South Point SMR. Of the three expansions the South Point SMR expansion would be the largest, including all of the southwest side of Santa Rosa Island in the MPA and adding over 27.5 square miles to the SMR. This is followed by Point Conception SMR's expansion eastward adding over 14 more square miles to the SMR, and lastly by Gull Island SMR's smaller northward expansion adding over 1.5 square miles to the closure.

The driving force behind Petition2023-33MPA is kelp restoration. The petition claims growing these MPAs would allow for the now protected areas to rebuild their kelp forests under no fishing pressure which would also mean less traffic in general. Kelp restoration is a very important subject in Santa Barbara County as several sectors, consumptive and non-consumptive, depend on healthy levels of kelp for commercial and recreational use. That being said, this commission believes removing fishing access in these areas will do little to nothing to promote kelp regrowth and more-likely prevent kelp rebuilding projects (seeding, artificial reefs, and sea urchin removal programs) from directly assisting in the rebuilding of our kelp forests. Besides fishing, factors such as water quality, water temperature, storms, and swell need to be considered as larger drivers of kelp loss, not larger closed areas. There are several active projects locally and statewide dedicated to kelp rebuilding, none of which remove fishing access from areas in order to rebuild the kelp because there is no reason to. We believe the same applies in the areas this petition looks at. There are no reasons these specific areas need a fishing closure to help kelp forests regrow; therefore, there is no justification for their expansion, especially into waters predominantly too deep for kelp to root and grow. Similar to petition 29, there has been specific public outcry against this petition for all of the above reasons at MPA collaboratives, and public meetings.

**Recommendation:** For these reasons this commission has decided to be against this petition and recommends the FGC deny it.

Signed, the Santa Barbara County Fish and Wildlife Commission,

Phil Beguhl (Chair) - 2nd District

Scott Cooper (Vice Chair) - 3rd District

Frank Abatemarco - 1st District

Chad Thomas - 4th District

David Morgan - 5th District

Jeff Landers - Santa Maria Sportsman's Association Representative

Whitney Uyeda - Santa Barbara Sport Fishing Representative

Jeff Maassen - Commercial Fisherman Representative

Steve Adam - Santa Ynez Valley Pistol and Bow Club Representative
